

Alrosa to Introduce Synthetic and Treated Diamonds Detector at Med Conference

March 02, 17 by Albert Robinson

(IDEX Online) – ALROSA representative Dr. Sergei Terentev will introduce the firm's newly developed instrument Diamond Inspector at the third Mediterranean Gemmological and Jewellery Conference in May.

The Diamond Inspector can identify: polished natural diamonds from polished synthetic diamonds, polished treated diamonds and diamond simulants, according to a statement from the organizers.

The ALROSA Diamond Inspector relies on three analytical methods to determine a polished diamond's origin. Previously, such capabilities were available only at specialized gem laboratories, the statement said. The gathering is being held in Syracuse from May 11 to 14, and is the third annual conference to be held in the Mediterranean region.....
